Dear Sirs,

I wanted to write in to wholly endorse the idea of Starlink being given a license. We live in St Andrew and our internet speeds vary between 8 and 15mps causing huge disruption to the workings of a fully CAT5 wired house and to me working at home. Often my zoom or teams calls are interrupted due to poor connectivity which affects my work. The speeds in Guernsey are 20 years behind the rest of the world.

When we lived in the UK 5 years ago not only did we have 300mps in London but even in a remote village in Pishill South Oxfordshire we had Village networks which was again a satellite system but was life changing for the area and was 60mps.

Please get this done as soon as possible.

Kind regards,

Simon Livesey
